

From 23 and Me to Gene Therapy: The Molecular Genetics Revolution

Kenneth R. Miller
Molecular Biology, Cell Biology, & Biochemistry
Brown University
Providence, RI 02912

• *Although genetic engineering and molecular biology have been part of the Biology curriculum for decades, the past several years have seen the introduction of new techniques that dramatically alter the landscape of human biology. We will examine how these powerful techniques work, suggest ways to incorporate them into the curriculum, and explore the promise and peril that awaits the brave new world of human genetic modification.*

Copies of the slides and Case Studies referred to in this workshop are available at:
